

Brunel Models Servo Mount - Assembly Instructions

There should be the 5 pieces as shown above in the kit.

Servo Mounting Holes

Assemble as shown in the 3D views above.

The servo mounts downwards (part 4 at the bottom).

Part 5 is screwed to your baseboard - a number of holes are provided to facilitate this.

They can be easily drilled to a larger size if desired.

The servo mounting holes are the correct size for the two self tapping screws provided with the SG90 servo.

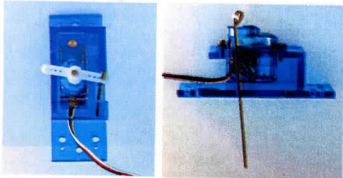

A micro-switch can be mounted using the holes in the side of part 2.

Glue together with Simply Glues Premier Cement or other acrylic glue.

The microswitch is available from Brunel Hobbies (BH-MS) .
See Brunel Hobbies web site for more information -
